

# ¡Bienvenidos a la clase de ESPAÑOL!

(A view of Alora, España)

As you may know, Spanish is a growing language in the United States, thus making it an increasingly important language to learn. I'm excited to be here to encourage your child's Spanish development!

Spanish has been a constant in my life since the 7<sup>th</sup> grade. I've been fortunate to have wonderful educators throughout my Spanish career, who have helped me come to love the language and develop a deep interest in numerous, yet distinct Spanish cultures. I have my BA in Spanish from Hanover College, and during my four years there I was able to take advantage of two Spanish study abroad programs. During these months abroad, my appreciation for the language and Spain's culture grew. I knew I had to go back for more!

After graduation from Hanover in 2008 I spent nine months in southern Spain teaching English at an elementary school in Alora. I had the opportunity to work with children of a wide range of ages, from kindergarten to 8<sup>th</sup> grade. Every single age group was special and spectacular! After about three weeks of working, I decided teaching was the path for me! While working toward my Master of Education at Xavier University, I taught Spanish at Knox Preschool and completed two long term substitutions at Indian Hill Middle School. After IHMS, I was fortunate to find a position teaching Spanish at Seven Hills Middle School. I am now here with your child at Wyoming because I believe in the importance of early second language education, and because I care very much for young learners.

So far the school year is off to a great start! It has been such fun to get to your child! Your child has learned key words in Spanish that help maintain positive and appropriate behaviors in class. Once we have finished developing our class community, we will move

on to stories! In order to best help your child acquire Spanish, I will be teaching through a storytelling method. This is a method I have used since working at Indian Hill. It is a wonderful, engaging method that has proven very effective in my experiences. Please see the handout on TPRS in this packet for more information. The core of the method is storytelling, but also includes other forms of comprehensible input. Your child will have the opportunity to practice Spanish through songs, dance, art, etc.

I am thrilled to be working with your child towards second language acquisition! If you have any questions, please do not hesitate to contact me:

Sincerely,

*Señorita Bruce*

# Research on TPR Storytelling

A handout for teachers, parents, students, and administrators

## What is TPRS?

TPRS is a language teaching method designed to develop real fluency. Students and teachers spend class time speaking in the target language about interesting, comprehensible stories.

## Has any research been done on TPRS?

Yes—articles have been published in the *International Journal of Foreign Language Teaching*, *CATESOL*, *Dimension*, and ProQuest Digital Dissertations.

## What do the studies show?

Varguez (2009) compared four beginning high school classrooms with different teaching methods and socioeconomic status, using a standardized Second Language Proficiency Examination. Her study showed that when socioeconomic status was held constant, **the TPRS classroom outperformed the traditional classroom**, and disadvantaged students who were taught with TPRS equaled the traditional students in the more affluent school district. This tells us that **TPRS is effective in both rich and poor schools, and can be used to close achievement gaps caused by socioeconomic status.**

Watson (2009) compared two beginning high school TPRS classrooms and one traditional classroom by testing the students with a final exam and an oral exam. Results showed that **the TPRS classes outscored the traditional students on both tests**, and that the distribution was wider in the traditional classes. This means that when taught with traditional methods, some students fail and others succeed, whereas **more students can succeed with TPRS.**

Spangler (2009) found that middle school and high school students in **TPRS classrooms significantly outperformed classrooms using Communicative Language Teaching on speaking**, and that the two groups of students **performed the same on reading and writing.**

Davidheiser (2001) reports that **TPRS improves pronunciation and vocabulary memory, reduces anxiety, is a natural way to learn language, promotes active learning, and is good for different types of learners.** He discusses the integration of grammar instruction with TPRS at the college level.

Braunstein (2006) found that even adult ESL students, who expected more traditional instruction, **responded positively to TPRS.** Students were enthusiastic about the class and reported that the methods helped them to remember vocabulary, and understand English.

**Every empirical research study on TPRS to date has found that TPRS students outperform traditional students on some measures of language skills—particularly on speaking. No study has found that TPRS students underperform traditional students.**

## How We Learn Languages

### How We Learn Languages

Since languages are not really an option any more, and since they are connected to our national security, things must change in our nation's foreign language classrooms.

Please take a moment to look over the following brief descriptions of the work of Stephen Krashen and Bill Van Patten on how we acquire languages. Both researchers are of gigantic importance in the world of foreign language acquisition.

If school officials were to familiarize themselves with their work, along with ACTFL, which is the national parent organization for all foreign language teachers regardless of level (>[www.actfl.org](http://www.actfl.org)), would also be a prudent move in the current national discussion.

I have been astounded on more than one occasion to find that there are a significant number of teachers working in classrooms nationally who have never heard of Krashen or VanPatten or ACTFL. This will change.

#### Stephen Krashen

If one takes a close look at them, it is clear that many of Krashen's hypotheses fully support communicative activities in the classroom. They imply that reaching kids, and not just teaching kids from a book, is a key factor in building fluency:

1. Communicative Competence, for example, is defined in sociocultural terms, meaning that interacting in L2 is more than just a mental exercise, but a participatory, social one. Robots cannot converse.
2. The Affective Filter Hypothesis states there is a "filter" or "mental block" that keeps L2 from "getting in" – the lower the filter, the easier it is to learn L2. Thus, human contact of a relaxed nature, i.e. reaching kids in a way that is meaningful to them, increases acquisition of L2.
3. The Affective Hypothesis states that factors of motivation, interpersonal acceptance, and self-esteem deeply affect learning L2. Thus, we reach students by focusing on them and valuing them as human beings in our classes.
4. The Comprehensible Input Hypothesis states that the learner can only acquire language by connecting it to prior knowledge. Language that is not understood is just L2 noise. Thus, we cannot just teach students, we must reach them by making sure that we speak to them in a way that they can understand us.
5. The Monitor Hypothesis states that the learner unconsciously corrects his or her speech to conform to the correct spoken and written speech of fluent speakers. Thus, we reach students by speaking to them in the target language, not by speaking to them in English. By speaking to them in L2 in ways that carry meaning and interest to them, we reach them.
6. The Natural Order of Acquisition Hypothesis states that structures of L2 emerge in much the same order as they do in L1, an order that cannot be re-arranged. This implies that the mind is selective and learns what features of a language it wants to learn when it wants to learn it, as it hears L2 on a daily basis. This calls into question the "grammar syllabus." Thus, we reach students by offering them the target language in forms that it can grasp, and not in ways that confuse them.

#### Bill Van Patten

Bill Van Patten's main point is that in order for input to be successful in teaching languages it must be of a communicative nature, which means that the focus must be on meaning. In this sense, he supports Krashen's concept of comprehensible input. Another major aspect of Van Patten's message is that language acquisition is different from any other kind of learning. Van Patten suggests that the brain treats language differently from normal human cognition and therefore should not be studied cognitively, which is how it is typically taught.
